ate graphics solutions it see things its own way.

A superset of all leading graphics solutions:

Computer Associates' Visual Information Software provides the first complete solution for corporate graphics needs. This software provides a broad range of application systems that eliminate corporate graphics growing pains such as: difficult data access, hard to use interfaces, incompatible graphics formats and limited output device access. Now, no matter what each department's and each end-user's needs might be, you will find them met with the most powerful and flexible graphics products in the industry.

Visual Information Software is comprised of:

- **CA-TELLAGRAF™ System** for end-user graphics.
- **CA-DISSPLA™ System**, programmable graphics for FORTRAN and COBOL application developers.
- **CA-Graphics Connection™** for complete integration of your existing environments, devices, and graphics applications.

Both **CA-TELLAGRAF** and **CA-DISSPLA** systems can be effectively used in any environment regardless of current device configurations. **CA-Graphics Connection** will allow you to complement your existing hardware investment and software investment.

Visual Information Software provides graphics solutions from PC to mainframe:

Compatible with virtually every graphics device and CPU. The user interface and capabilities required for each individual user is also provided. Choose the system that's right for you and take advantage of the total corporate solution.

THE VAX ATTACK!

In Federal Computer Week, Sep. '88, Robert Petkowicz of Anser Corp. (SDI Projects) talks about his favorite computer system . . .

"It has a 68030 processor. . ."

Imagine your own Desktop Workstation with a 16 MHz 68030, a 68882 at up to 33 MHz, and as much as 16 MB of 32 bit RAM . . .

"A removable hard disk. . ."

Choose from a variety of mass storage devices including Bernoulli's™ Tape Stream, WORM's, and removable hard drives for classified data . . .

"Outperforms a VAX 11/785. . ."

With the capability to display UNIX™ IBM Dos, X-Windows, and Amiga Dos on screen simultaneously, this can't be a \$100,000 VAX . . .

Right. It's a CSA Desktop Graphics Workstation based on the Amiga 2000, and it starts at just \$7995. Networking to your Sun or Vax is optional.

CSA. We set the standards in performance.

Meet the technology leaders in

Computer Graphics

—at the Invitational Computer Conference near where you live and work.

The Computer Graphics market is growing so fast it's hard to keep up with the products and trends you need to know about for informed quantity purchase decisions. So we make it easy for you—at the Invitational Computer Conference (ICC), the one-day, seminar/product displays that bring the latest information on computer graphics hardware and software technology and products to your area. This year there are eight ICCs dedicated exclusively to the computer graphics systems integrators, OEMs and volume end users in the United States and Europe. One will be convenient for you.

The ICCs are so popular because they give you just what you need to know without wasting your time or money. You don't travel far, there's no admission fee, the seminars and table-top displays from major manufacturers are all targeted to your interests (no searching through aisles), and the atmosphere is informative and hands-on, but congenial, with refreshments served. In a few hours you'll have the latest story on the newest and best in graphics, CAD/CAM/CAE/CIM/CAP, etc.

Invitations to the ICC in your area are available from an exhibitor or the ICC management. Request yours today.

Print, Film & Video

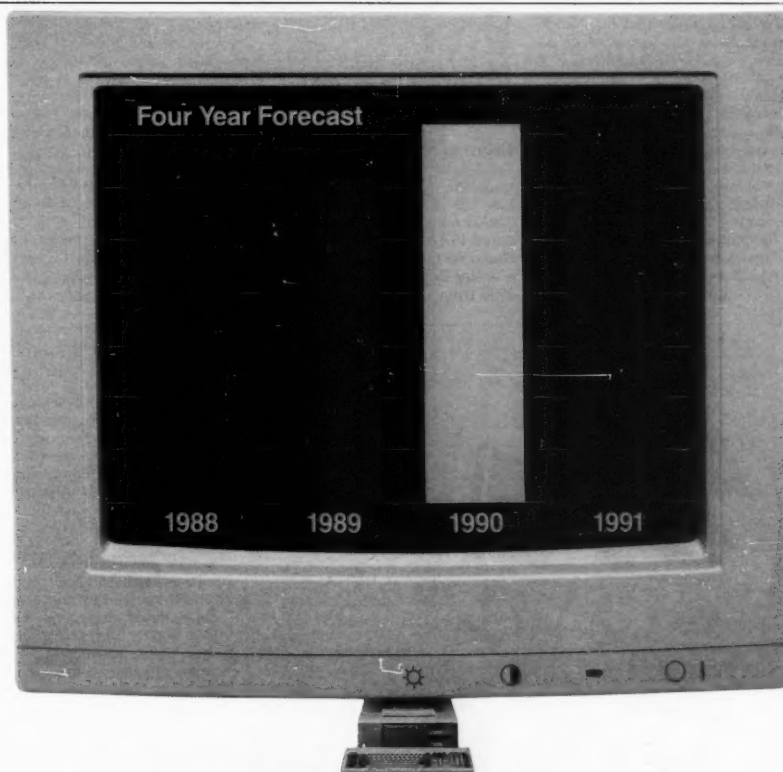

Electronic CAD

Buyer's Guide

Selecting CAD hardware and software for personal computers can be a trying process, demanding that cost- and quality-conscious buyers sift through promotional material from an overwhelming number of vendors before making a decision. In light of this, Design Solutions introduces its *Buyer's Guide* for electronic CAD for personal computers. The guide is aimed at novice buyers, and has over 150 items that need to be considered as well as work sheets for vendor comparison. The guide is available for \$25 from Design Solutions, 2912 Daubenbiss Ave., Suite 32, Soquel, CA 95073, (408) 688-0317.

CAD/CAM Networking (36 minutes) is a new videotape exploring developments, applications and trends in this area. The tape includes interviews with industry experts discussing their experiences with the technology, and several examples of CAD/CAM networking in action. For example, at Boeing Military Airplanes, networking controls a system used to produce over 33,000 parts maintained in the design data library. The tape is available for \$200 from the Society of Manufacturing Engineers, One SME Drive, P.O. Box 930, Dearborn, MI, 48121, (313) 271-1500, Ext. 418/419.

Drawing With A Microcomputer (192 pages) by Donald D. Spencer and Susan L. Spencer is a book for those interested in learning to paint and see p. 23

Make A Graphic Impression On Your Audience

With the Panasonic® DataMaster™

No matter what you're presenting, or whom you're presenting to, it's easy to see why the Panasonic DataMaster (PT-105) is the automatic choice for big screen (up to 120") computer generated graphics and data.

Take its totally automatic scanning capability. Regardless of the PC you're using, the DataMaster provides complete, automatic adjustment. In fact, the DataMaster interfaces with virtually any computer with a scanning frequency of 15kHz-37kHz horizontally and 50Hz to 100Hz vertically. That makes it ideal when you want to make a graphic impression on your audience.

The DataMaster continues to shine when it comes to picture quality. Three high power liquid cooled CRTs, a silicone gel optical coupling system,

and a dual focus 5 element hybrid lens configuration team-up to produce eye pleasing specs. A bright 550 lumens, horizontal resolution of 1,100 lines (RGB) and 650 lines for video.

When it comes to international video formats, the DataMaster is right at home. It automatically compensates for

PAL, SECAM, NTSC and M/NTSC formats. The DataMaster also features a wide selection of input facilities including S-VHS, line-in, RGB 1, RGB 2 and audio.

The Panasonic DataMaster PT-105. The picture is big. The performance is even bigger.

For more information on the Panasonic DataMaster, call Panasonic Industrial Company at 1-800-553-7222. Or contact your local Panasonic Professional/Industrial Video Dealer.
